

Electric Dairy Cold Storage (Classic Reprint)

Excerpt from Electric Dairy Cold Storage
The practicability of electric dairy cold storage has been tested for two to four years on three retail dairy farms in the New Hampshire rural electrification experiment. The storage rooms vary in size from 170 to cu. Ft. Contents and have been operated under a variety of conditions with similar equipment of the dry room type. Initial investments for mechanical refrigeration equipment were from \$635 to \$766, whereas initial investments for the ice method on the same farms varied from \$135 to \$775 with an average of \$455. Yearly fixed charges were thus generally less for the ice method. Cash or money-out-of-pocket expense for operating refrigeration was in general less for ice, but in one case was in favor of the electric method.
